Education

Birla Institute of Technology and Science, Pilani — Goa, India
M.E. in Computer Science; CGPA: 8.36 — *2024 – 2026*

University College of Engineering and Technology, Bikaner — Bikaner, Rajasthan
B.Tech in Computer Science and Engineering; CGPA: 8.1 — *2018 – 2022*

Experience

SDE Intern — Jan. 2026 – Jun. 2026
Oxyzo — *Gurugram, India*

- Built an AI-generated document detection system combining fine-tuned Vision Transformer models with OpenCV forensic features and C2PA checks to classify documents as Real, Suspicious, or Fake.
- Built an LLM-based sanction letter extraction system using Qwen2.5-1.5B-Instruct, LoRA fine-tuning, Unsloth, and JSONL datasets, generating structured JSON for data verification and mismatch detection.
- Migrated all data tables on internal fintech platforms to a responsive table-to-card layout for mobile, and fixed frontend UI bugs to improve usability.

Projects

LLM-Based Loan PDF Information Extraction System | Apr. 2026 – May 2026

- Built an LLM-powered pipeline to extract structured financial fields from loan sanction PDFs across 5 different document formats from multiple companies.
- Prepared supervised fine-tuning datasets by converting loan PDF text and expected outputs into JSONL chat-format training data.
- Fine-tuned Qwen2.5-1.5B-Instruct using Unsloth, LoRA, 4-bit quantization, TRL SFTTrainer, and long-context training for domain-specific financial document extraction.

AI-Generated Document Detection System | May. 2026 – June 2026

- Built a pipeline to detect AI-generated or fake documents (images and PDFs) and classify them as Real, Suspicious, or Fake with a 0–100 risk score.
- Combined two fine-tuned vision transformer models (Hugging Face) with OpenCV-based forensic features such as text layout, skew, margins, JPEG artifacts, noise, and frequency analysis (FFT/DCT).
- Added C2PA content-credential checks to instantly flag files with verified AI-generation metadata.

WooCommerce Hosting Platform with Team MCP Gateway | Oct. 2026 – Oct. 2026

- Built a WooCommerce hosting platform on Kubernetes using Helm charts with separate local and production values, deployed to Kubernetes IN Docker and k3s with Ingress, persistent storage, Kubernetes Secrets, and liveness/readiness probes.
- Built a custom MCP server for store products and orders, and an MCP gateway that connects 3+ servers through one endpoint.
- Created a React dashboard with admin/member roles, hashed and revocable API keys, a full tool-call audit log, and an LLM chat agent that calls tools through the gateway as the logged-in user.

Human Activity Recognition using ConvLSTM and LRCN | Jan. 2025 – Feb. 2025

- Implemented ConvLSTM and LRCN deep learning architectures for human action classification using a subset of the UCF50 dataset.
- Used Python, OpenCV, TensorFlow, Keras, and scikit-learn for video preprocessing, model training, and evaluation.
- Achieved 83.6% test accuracy with the LRCN model and developed a real-time prediction pipeline for unseen videos.

Technical Skills

Languages: Python, C++, C, SQL
AI/ML: RAG Pipeline, Multi-Agent System (LangChain, LangGraph), LLM Fine-tuning, Machine Learning, Deep Learning, Neural Networks, Transformers, Model Context Protocol (MCP)
Developer Tools: Git, GitHub, Linux, VS Code, IntelliJ IDEA
